

HYBRID dx2

The world's first water-powered robotic pool cleaner

Hybrid Robotic Pool Cleaner

DOLPHIN HYBRID dx2

Patent-pending technology converts water flow into electricity that operates the Dolphin Hybrid dx2 – creating an exceptionally efficient robotic cleaner.

With the Dolphin Hybrid dx2, pool cleaning is fast, efficient, eco-friendly and cost-effective.

Electrically Self-powered System

Uses pool water circulation to generate electricity for the robotic scanning system. Electrical LED indicator signals normal operation and indicates flow rates.

Drive System

Electrical switch operates the driving gear for efficient, quick and precise maneuvering.

Wall sensor, slope climbing and obstacle avoidance abilities.

Pool Coverage

CleverClean scanning algorithm ensures excellent and efficient pool coverage. Covers a mid-sized pool in approximately 1.5 hours.

Thorough Brushing Capabilities

The Dolphin Hybrid dx2 is the only cleaner of its kind equipped with an underside brush that thoroughly scrubs the pool floor to remove algae and bacteria.

Cleaning Capabilities

Patent-pending, super-efficient turbine allows continuous transmission of dirt through the turbine to the filter. Handle even rough debris, including acorns, twigs and leaves, guaranteeing smooth operation.

Efficient suction chamber leaves a clean path while scanning the pool.

Escape Mode

CleverClean software identifies when the robot has reached a wall or object and efficiently maneuvers the robot back into the scanning pattern.

Overcomes obstacles, such as drain covers, using mechanical and software systems.

Energy Saving

Dolphin Hybrid dx2 cleans the entire pool in a very short time requiring minimal usage of the pool pump's energy.

Leaf Canister (optional)

A Fine filtration canister that connects to the last section of the hose (prior to the skimmer) provides an additional filtration layer, thus reducing the load of the main pool filtration system.

Included Accessories

Skimmer adapter, 90° Adapter, Automatic Safety Valve, Flow Indicator.

Specifications:

| | |
|----------------------|--|
| Weight: | 9.9lb (4.5kg) |
| Hose length: | set of 10 3.83ft (1.17m) hose sections |
| Required water flow: | 30-35 GPM |
| Cleaning time: | 1-2 hours |
| Warranty: | 2 years |

Electrical hydro power
